

## ENVIRONMENTAL ASSESSMENT DECISION NOTICE

Reintroduction of Native Westslope Cutthroat Trout in Peet Creek by removal of Nonnative Hybrid Rainbow x Cutthroat Trout with Rotenone

Montana Fish, Wildlife & Parks  
Region 3, Bozeman  
June 7, 2013

### **Proposed Action**

Montana Fish, Wildlife & Parks (FWP) has proposed this project to facilitate conservation of native westslope cutthroat trout (WCT) in Southwest Montana. Genetically “pure” WCT are estimated to persist in only four percent of their historic range in the upper Missouri River drainage, and most remaining populations are considered “*at-risk*.” The proposed project, located in Peet Creek (near Lakeview), includes the use of a piscicide (rotenone) to remove non-native trout that threaten WCT and transfer of WCT into stream reaches where nonnative trout have been removed. This project is designed to reduce threats to WCT populations considered *at-risk*, to increase the overall distribution of WCT, and to conserve the genetic legacy of existing WCT populations.

### **Montana Environmental Policy Act**

Montana Fish, Wildlife & Parks is required by the Montana Environmental Policy Act (MEPA) to assess significant potential impacts of a proposed action to the human and physical environment. A draft Environmental Assessment (EA), in compliance with MEPA, was prepared by FWP for the proposed project and released on April 26, 2013 for a 30-day public comment period. The draft EA was titled: Reintroduction of Native Westslope Cutthroat Trout in Peet Creek by removal of Nonnative Hybrid Rainbow x Cutthroat Trout with Rotenone. The draft EA was circulated to a standard FWP Region 3 contact list and was also posted and remains available for viewing on the FWP webpage: <http://fwp.mt.gov/news/publicNotices>. Legal notice indicating release of the EA was sent to the *Dillon Tribune*.

### **Summary of Public Comment and FWP response**

No public comments were received regarding this EA.

**Final Environmental Assessment for the EA titled:** Reintroduction of Native Westslope Cutthroat Trout in Peet Creek by removal of Nonnative Hybrid Rainbow x Cutthroat Trout with Rotenone.

There are no modifications necessary to the Draft Environmental Assessments based on public comment. The Draft Environmental Assessment, together with this Decision Notice, will serve as the final document for this proposal.

## **Decision**

Based on the Environmental Assessment, public comment, and the need to conserve WCT in the Missouri River drainage of SW Montana, it is my decision is to proceed with the proposed WCT conservation project in the Peet Creek drainage.

I find there to be no significant impacts on the human and physical environments associated with this project. I therefore conclude that the Environmental Assessment is the appropriate level of analysis, and that an Environmental Impact Statement is not required.
